

Field Portal

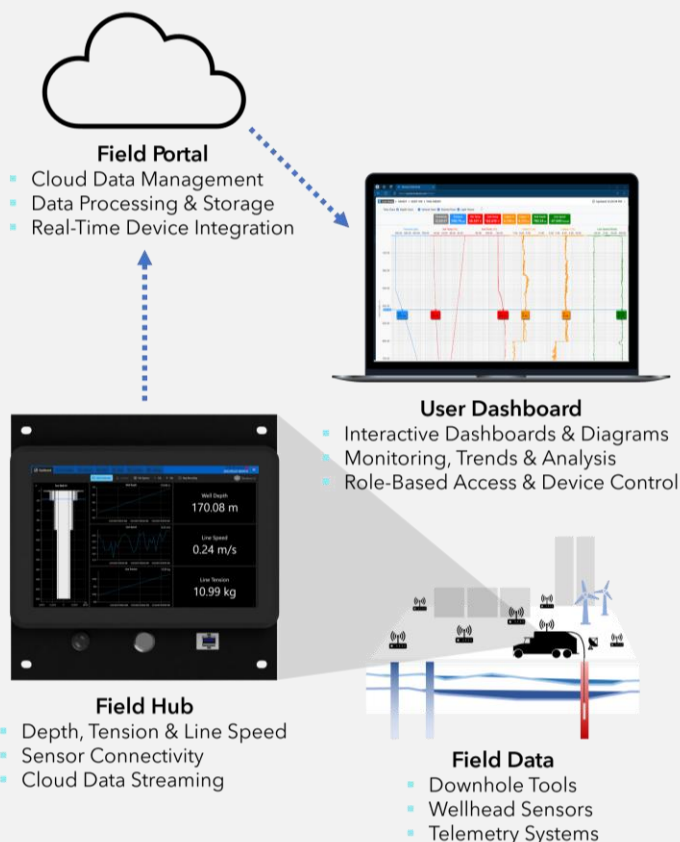

Real-Time Data Management & Operational Insight

Field Portal is a cloud-native platform for managing and visualizing field data. It combines historical log management, live SRO streaming, and advanced analytics into a unified system—giving teams instant access to wellsite data, interactive diagrams, and decision-ready insights from anywhere.

Key Benefits

- **Unified platform:** Manage logs, diagrams, and devices in one secure workspace
- **Flexible integration:** Connect with Field Hub, third-party systems, and APIs
- **Real-time decisions:** Monitor live sensor data with high-performance interactive charts

Core Features

- Interactive well diagrams with overlay support for caliper, spinner, and pressure data, linked to both live and historical sessions
- Depth/time charting with annotations and export options to CSV, LAS, and other formats
- Structured log storage with automated parsing for fast ingestion and long-term retention
- Secure browser-based access with role-based permissions and multi-device support

CRS - Cloud Remote Service

- Live SRO telemetry from Field Hub units via Ethernet, Wi-Fi, cellular, or Starlink™
- Real-time charting with annotation tools for depth, tension, and sensor data
- Guest access for live and archived sessions with secure sharing controls
- Device-level session browser with export options for third-party workflows
- Diagram sync for contextual analysis during active jobs and remote collaboration

DMS - Data Management Service

- Centralized archive for wireline logs, memory sessions, and structured field data
- Field and well layout tools for organizing spatial context and operational history
- Advanced visualization with diagram overlays, XY caliper plots, and spinner analysis
- Trend analysis across wells and time periods to support planning and diagnostics
- Export-ready datasets for compliance, reporting, and external analytics platforms

Stratus IO delivers connected field solutions for energy, geothermal, and industrial operations—combining rugged edge hardware, wireless sensors, and a secure cloud platform for real-time insight and safer, more efficient workflows. With deep expertise in IoT, SaaS, and embedded systems, we also offer engineering services to help teams integrate, customize, and optimize their field operations. Whether you're deploying new tools or modernizing legacy systems, Stratus IO helps you design smarter, faster, and more reliable workflows.
